NOTE.

The favor with which the first edition of this list was received leads me to feel that it supplied a want among fern collectors, and, as that edition is now nearly exhausted, the second has been prepared with a number of additions and alterations, and, I think, improvements.

Prof. Eaton has revised the old list and again permits me to use his name as endorsing this. At his suggestion certain doubtful species are referred to the species of which they are probably varieties. The so called varieties *O. cinnamomea*, *frondosa*, and *O. sensibilis*, *obtusilobata* are omitted, as are all English names. The many changes and additions render it necessary to omit the numbers previously used.

It is probable that some species now admitted to the list will prove to be only varieties of other species: as *P. intermedium*, and *P. falcatum*.

Others are doubtful as natives of this country, having been placed as North American hastily or erroneously by early authors.

At the suggestion of several friends, a change has been made in the type, which is judged to be an improvement.
